PHYSICS AND OPTICS IN SEMICONDUCTOR LITHOGRAPHY INDUSTRY

Jos Benschop, ASML (Netherlands)

Moore's Law dictates that every 18 months the number of transistors on an integrated chip doubles. This is first and foremost enabled by optical lithography printing ever smaller transistors on an integrated circuit. ASML is market and technology leader in this multi-billion euro industry. State-of-the art immersion scanners, using 193 nm light and immersion optics with numerical aperture of 1.35, print 40 nm wide lines on a 300mm resist coated silicon wafer at a rate well above 200 wafers/hour. Extreme Ultra Violet scanners, using 13 nm light, print features well below 20nm. After an introduction into IC fabrication, the role of lithography and ASML, past present and future of optical lithography will be discussed. Examples how the extensive network of technology partners enables ASML to insert new technology in time will be shared.

Biography: **Jos Benschop** received his MSc (cum laude) and PhD from physics faculty in Twente University. From 1984 until 1997 he worked at Philips on optical metrology and optical recording. He joined ASML in 1997. ASML designs, builds and sells lithography and is world-wide market and technology in a multi B€ market. As Senior Vice President Technology he is responsible for the definition and execution of research/advanced-development program which is executed internal ASML and with an extensive network of international partners. Furthermore he is responsible for System Engineering which includes system specification and design as well as system integration and testing. He has published 27 papers and generated 15 patents. He is an SPIE fellow and part-time professor "Industrial Physics" at the University of Twente.

ADVANCES IN IMAGING AND ANALYSIS TECHNIQUES FOR DEFENSE AND SECURITY SURVEILLANCE

Peter H. N. de With, Technische Univ. Eindhoven (Netherlands)

The sensors of surveillance cameras are increasingly based on CMOS, which offers a high quality and sensitivity for a relatively low price, leading to a fast upgrading of camera solutions in terms of resolution. Besides this success, alternative sensing modalities are also more deployed, such as (near-) infrared sensing for depth reconstruction and hyper spectral imaging. With Ultra-High Definition resolution emerging (10-fold HD resolution), surveillance imaging is breaking the border for specific applications that would otherwise not be possible with HD imaging. In the presentation, we discuss key aspects for enabling of these novel applications. Examples of such aspects are advanced image analysis using context information in addition to object detection, stereo 3D camera processing and 3D reconstruction.

An interesting Defense application that is discussed is change detection for real-time surveillance using UHD cameras. A UHD camera is mounted on a driving car which is inspecting the road ahead up to 50 meters, while the images are compared in real-time with previously recorded images to detect any possible changes. This system was evaluated in a recent NATO trial. Other applications are disparity processing and depth reconstruction to reliably detect traffic participants in front of a moving vehicle. In both applications context information and 3D depth processing adds additional performance and robustness.

Biography: **Peter H.N. de With** graduated in Electrical Engineering (MSc., ir.) from Eindhoven University of Technology and received his Ph.D. degree from University of Technology Delft, The Netherlands. From 1984-1997 he worked for Philips Research Eindhoven, where worked on video compression chaired a cluster for programmable TV architectures as senior TV Systems Architect. From 1997-2000, he was full professor at the University of Mannheim, Germany, Computer Engineering, and chair of Digital Circuitry and Simulation. From 2000-2007, he was with LogicaCMG in Eindhoven as a principal consultant Technical SW and distinguished business consultant. He was also parttime professor at the University of Technology Eindhoven, heading the chair on Video Coding and Architectures. In the period 2008-2010, he was VP Video (Analysis) Technology at CycloMedia Technology. Since 2011, he is assigned full professor Video Coding and Content Analysis at Eindhoven University of Technology and appointed scientific director Care & Cure Technology and theme leader Smart Diagnosis in the University Health program. De With is a national and international expert in video surveillance for safety and security and has been involved in multiple EU projects on video analysis, featuring object and behavior recognition, and also surveillance projects with the Harbor of Rotterdam, Dutch Defense, Bosch Security Systems, TKH-Security, etc. He is board member of Dutch Institute of Technology for Safety and Security (DITSS) and R&D advisor to multiple companies. De With is Fellow of the IEEE, has (co-) authored about 50 journal papers and book chapters and over 300 conference papers on video coding, analysis, architectures, 3D processing and their realization. He is the (co-)recipient of multiple awards, such as the SMPTE team Award for the DV standard, a Philips Innovation Award, IEEE CES Chester Sall paper awards, VCIP paper award, best IEEE Transactions paper awards and Machine Vision Conference Paper Award.

50 YEARS OF SPACE INSTRUMENTATION DEVELOPMENT IN THE NETHERLANDS

Bart Snijders, TNO, Netherlands

In 1964 the optics department of TNO got involved in the emerging field of space instrumentation, by developing a telescope and spectrometer for the European satellite TD14. Since then a growing list of optical sensors and instruments has been developed by a cluster of Dutch companies and research institutes, often driven by scientific objectives provided by astronomers and climate researchers.

For Space Science missions such as HIPPARCOS, Hubble, Herschel and GAIA significant contributions were provided by the Dutch. In cooperation with ESA, NASA and European (industrial) partners several generations of spectrometers for monitoring atmospheric constituents have been developed successfully (e.g., GOME, SCIAMACHY, OMI). Currently the TROPOMI imaging spectrometer instrument is in its final stage of integration and test. Many of the instruments developed were based on unique concepts, technologies and components, some of which will be discussed.

Today technological developments still continue, as new instruments with ever increasing performance are required.

Biography: **Bart Snijders** is a Consultant and Business Developer for projects for Space, Astronomy, Industrial applications and Big Science with twenty eight years of experience in optical instrumentation development.

Bart graduated from the University of Delft with M.Sc. in Applied Physics. Since 2006 he has been in charge of coordination of internal research programs, cooperation with international companies and universities, e.g. Dutch Joint Aperture Synthesis Team with Sterrewacht Leiden, Dutch Space, SRON, Technical University Delft (Prof.J.Braat), Knowledge Centre Aperture Synthesis; as well as marketing, business development, and project acquisition. He is part of the program management team of the national preparation program ITER-NL.

Bart Snijders is currently responsible for network building and program development for Big Science, and member of ILO-net, a team of Industrial Liaison Officers from the major Dutch Scientific institutes; as well as the program management of TNO strategic research program for Space (Earth observation) and Mission Critical Components.

Mr. Snijders is one of the founders of the European Technology Platform Photonics21; he is also the Chairman of the Board of the Photonics Cluster Netherlands.

REMOTE SENSING AT THE NASA KENNEDY SPACE CENTER: A PERSPECTIVE FROM THE GROUND UP

Lisa Huddleston, NASA KSC Weather Office (United States)

This presentation provides an overview of ground based operational remote sensing activities that support a broad range of NASA missions at the Kennedy Space Center (KSC).

Many types of sensors are in use by KSC and across the Eastern Range. For this discussion, we will examine remote sensors for winds, lightning and electric fields, precipitation and storm hazards. These sensors provide data that are used to develop climatology databases to support NASA launch vehicle design studies; to assess and satisfy launch commit criteria and to ensure the safety of ground processing personnel and equipment. The wind sensors include the 50 MHz and 915 MHz Doppler Radar Wind Profilers (DRWP); the field mill network for sensing atmospheric electric field intensity; lightning aloft and cloud-to-ground lightning sensors; and the weather radars.

Next, we will discuss a field demonstration known as KaBOOM. Ka Band Object Observation and Monitoring is not an instrument, but rather is a field demonstration to determine the possibility of constructing an interplanetary radar instrument. KaBOOM is a phased array of three 12 meter antennas being built as a technology demonstration for a future radar system that could be used to track deep-space objects such as asteroids. Transmissions at Ka Band allow for higher bandwidth than at lower frequencies, but the signals are also far more susceptible to de-correlation from turbulence in the troposphere, as well as attenuation due to water vapor, which is plentiful in the Central Florida atmosphere. If successful, KaBOOM will pave the way for an array of many more elements that will enable us to reach the goal of tracking asteroids up to 45 million miles away, five times further than we can track today.

Finally, we will explore the use of Site Test Interferometers (STI) as an atmospheric sensor. The STI antennas continuously observe signals emitted by geostationary satellites and produce measurements of the phase difference between the received signals. STIs are usually located near existing or candidate antenna array sites to statistically characterize atmospheric phase delay fluctuation effects for the site. There is a three-element STI located at the KaBOOM site at KSC. An STI measures the fluctuations in the difference of atmospheric delay from an extraterrestrial source to two points on the Earth separated by a distance comparable to the separations between elements of microwave antennas that could be combined as phased arrays for communication and navigation.

Biography: **Dr. Lisa Huddleston** is the Chief of NASA's Applied Meteorology Unit (AMU) at the Kennedy Space Center Weather Office. In this position, Lisa is responsible for leading the AMU in their primary mission of transitioning new technology from research to the operational environment. Dr. Huddleston has over 25 years of professional experience in space operations engineering and science and has published numerous scientific and technical papers. Her publications have spanned a broad range of topics including satellite remote sensing of the sea surface; data mining, Space Shuttle Orbiter thermal tile debris impact damage monitoring and trending, and most recently, assessing the probability that any individual cloud-to-ground lightning stroke was within any radius of any launch site facility. Lisa has received numerous awards and citations including two-time Engineer of the Year; NASA Space Flight Awareness Award and the coveted Silver Snoopy Award presented by the Astronaut Office. Dr. Huddleston holds a BS in Industrial Engineering from University of Missouri, an MS in Engineering Management and a PhD in Environmental Science from the Florida Institute of Technology.

Attaining Damage and Destroy Countermeasures

Session Chairs: Robert J. Grasso, Northrup Grumman Electronic Systems (United States); David H. Titterton, UK Defence Academy (United Kingdom)

As threats become more sophisticated and countermeasure tolerant new means are required to effect defeat. Please join us for an engaging discussion that will cover such topic areas as:

What CM technology is relevant. How does that atmosphere impact/limit effectiveness. Is directed energy the only solution and what other approaches might be just as effective. What SWaP concerns exist. What has been proven effective.

This open discussion is an opportunity for conference attendees to compare, contrast, and debate what approaches might work and further discuss the advances in technology that might have to be made and the impacts of threat and environment that might limit these approaches.

Please join us and share your experience, knowledge, and insight. And have some fun as well.

PANEL DISCUSSION

Detecting More Threats: More Pixels, More Cameras, Both; or Better Image Processing and Analytics

Moderator: **Doug Burgess**, Burgess Consulting (United Kingdom)

Everyone in a street, a railway station or a crowded airport departure lounge is a potential criminal or terrorist. Whilst police and security forces have successfully neutralised many threats, our protectors need to be constantly vigilant if they are to keep on top of evolving threats. Technology will help them identify threats, but which technology mix will help the most?

Whoever you are - a technology researcher, supplier or user for example - come along to this informal discussion: share your viewpoint with us and help create a vision for the future for imaging sensors and image processing technologies that best support our law enforcement agencies.

Sensing systems have become a strategic pillar of our countries, playing fundamental role in citizens' health and well-being, in societal and environmental security, in infrastructures and services safety and even in political stability. The PD discussion will focus on the chemical sensors, aiming at evidencing complementarity and hyphenation of different sensing transductions. The aim is to include all possible issues of sensing, from the development of any components of a sensing system, to the definition of standard materials and methodologies. Problems involving specific fields will be also faced. Academia, public institutions and companies are involved. Starting from scientific/technical issues, the discussion will evolve to explore the reliability to establish a network suitable to give answer to requirements that come from EU and US.

TRAVEL/TRANSPORTATION

Welcome to Amsterdam

From its humble beginnings as a 13th-century fishing village on a river bed to its current role as a major hub for business, tourism and culture, Amsterdam has had a strong tradition as a centre of culture and commerce. Representatives of 178 countries live here and the melting pot that is Amsterdam comes alive under the various influences. In the city where an estimated 58% of the population plus visitors cycle 881,000 bikes daily, bikes are as present as its canals and 2,500 houseboats. Green energy is a major theme which is demonstrated by 650 electric vehicle charging points. In your spare time, come visit the paintings by Van Gogh or Rembrandt or the wax statues at Madame Tussauds, or simply wander around town admiring buildings from the 16th, 17th, and 18th centuries which are in excellent condition. You can also enjoy any number of concerts, be they classical or modern, or simply pass the time in one of the numerous cafes and bars. Of course the Red Light district is also a major attraction! Together with its hub airport of Schiphol, Amsterdam is one of the turntables of Europe.

By registering for this event, I waive any right to inspect or approve the use of the images or recordings or of any written copy. I also waive any right to royalties or other compensation arising from or related to the use of the images, recordings, or materials. By registering, I release, defend, indemnify and hold harmless SPIE from and against any claims, damages or liability arising from or related to the use of the images, recordings or materials, including but not limited to claims of defamation, invasion of privacy, or rights of publicity or copyright infringement, or any misuse, distortion, blurring, alteration, optical illusion or use in composite form that may occur or be produced in taking, processing, reduction or production of the finished product, its publication or distribution.

Payment Method

Registrants for paid elements of the event, who do not provide a method of payment, will not be able to complete their registration. Individuals with incomplete registrations will not be able to attend the conference until payment has been made. SPIE accepts VISA, MasterCard, American Express, Discover, Diner's Club, checks and wire transfers. Onsite registrations can also pay with Cash.

Authors/Coauthors

By submitting an abstract, you agree to the following conditions: An author or coauthor (including keynote, invited, and solicited speakers) will register at the author registration rate, attend the meeting, and make the presentation as scheduled.

A full-length manuscript (6-page minimum) for any accepted oral or poster presentation will be submitted for publication in the SPIE Digital Library, printed conference Proceedings, and CD. (Some SPIE events have other requirements that the author is made aware of at the time of submission.)

Only papers presented at the conference and received according to publication guidelines and timelines will be published in the conference Proceedings and SPIE Digital Library (or via the requirements of that event).

Audio, Video, Digital Recording Policy

Conferences, courses, and poster sessions: For copyright reasons, recordings of any kind are prohibited without prior written consent of the presenter or instructor. Attendees may not capture or use the materials presented in any meeting/course room, or in course notes on display without written permission. Consent forms for material presented in meeting rooms are available at Speaker Check-In. Individuals not complying with this policy will be asked to leave a given session and/or asked to surrender their recording media.

Exhibition Hall: For security and courtesy reasons, recordings of any kind are prohibited unless one has explicit permission from on-site company representatives. Individuals not complying with this policy will be asked to surrender their recording media and to leave the exhibition hall.

Your registration signifies your agreement to be photographed or videotaped by SPIE in the course of normal business. Such photos and video may be used in SPIE marketing materials or other SPIE promotional items.

Laser Pointer Safety Information/Policy

SPIE supplies tested and safety-approved laser pointers for all conference meeting rooms. For safety reasons, SPIE requests that presenters use provided laser pointers.

Use of a personal laser pointer represents user's acceptance of liability for use of a non-SPIE-supplied laser pointer. If you choose to use your own laser pointer, it must be tested to ensure <5 mW power output. Laser pointers in Class II and IIIa (<5 mW) are eye safe if power output is correct, but output must be verified because manufacturer labeling may not match actual output. Come to Speaker Check-In and test your laser pointer on our power meter. You are required to sign a waiver releasing SPIE of any liability for use of potentially non-safe, personal laser pointers. Misuse of any laser pointer can lead to eye damage.

Access to Technical and Networking Events

Persons under the age of 18 including babies, carried or in strollers, and toddlers are not allowed in technical or networking events. Anyone 18 or older must register as an attendee. All technical and networking events require a valid conference badge for admission.

Underage Persons on Exhibition Floor Policy

For safety and insurance reasons:

- No persons under the age of 18 will be allowed in the exhibition area during move-in and move-out.
- Children 14 and older, accompanied by an adult, will be allowed in the exhibition area during open exhibition hours only
- All children younger than 14, including babies in strollers and toddlers, are not allowed in the exhibition area at any time.

Unauthorized Solicitation Policy

Unauthorized solicitation in the Exhibition Hall is prohibited. Any non-exhibiting manufacturer or supplier observed to be distributing information or soliciting business in the aisles, or in another company's booth, will be asked to leave immediately.

Unsecured Items Policy

Personal belongings should not be left unattended in meeting rooms or public areas. Unattended items are subject to removal by security. SPIE is not responsible for items left unattended.

Wireless Internet Service Policy

At SPIE events where wireless is included with your registration, SPIE provides wireless access for attendees during the conference and exhibition but cannot guarantee full coverage in all locations, all of the time. Please be respectful of your time and usage so that all attendees are able to access the internet.

Excessive usage (e.g., streaming video, gaming, multiple devices) reduces bandwidth and increases cost for all attendees. No routers may be attached to the network. Properly secure your computer before accessing the public wireless network. Failure to do so may allow unauthorized access to your laptop as well as potentially introduce viruses to your computer and/or presentation. SPIE is not responsible for computer viruses or other computer damage.

Mobile Phones and Related Devices Policy

Mobile phones, tablets, laptops, pagers, and any similar electronic devices should be silenced during conference sessions. Please exit the conference room before answering or beginning a phone conversation.

Smoking

For the health and consideration of all attendees, smoking is not permitted at any event elements, such as but not limited to: plenaries, conferences, workshops, courses, poster sessions, hosted meal functions, receptions, and in the exhibit hall. Most facilities also prohibit smoking in all or specific areas. Attendees should obey any signs preventing or authorizing smoking in specified locations.

Hold Harmless

Attendee agrees to release and hold harmless SPIE from any and all claims, demands, and causes of action arising out of or relating to your participation in the event you are registering to participate in and use of any associated facilities or hotels.

Event Cancellation

If for some unforeseen reason SPIE should have to cancel the event, registration fees processed will be refunded to registrants. Registrants will be responsible for cancellation of travel arrangements or housing reservations and the applicable fees.
