Tourist Information

Seville, capital of Andalusia, Roman, Arabic, Renaissance, Baroque, Latin American, Marian, flamenco, bull-fighting, modern, festive, bright, perfumed, sea-faring, traditional, hospitable, gracious, cosmopolitan, religious...All of these adjectives, and many more can be applied to this city, which not only typifies all that is "Spanish" and "Andalusian," but also contains countless artistic, cultural, leisure, social and tourist attractions, that is has also become one of the most universal, best-known and most-visited cities in the world, birthplace and inspiration of writers, painters and artists in general.

"The Bullring"

It is very hard to find another urban centre which boasts such varied and unusual monuments and places of such beauty as the Giralda, the Cathedral, Los Reales Alcázares (Arabic Palace), the Torre del Oro, the Patio de los Naranjos, the Maestranza (bull-ring), the Casa de Pilatos, the Plaza de España, the María Luisa Park, the Maestranza theatre, the St. Telmo Palace, the Archivo de las Indias (Indian Archives), the Barrio de Santa Cruz (Santa Cruz district in the city centre), the Lonja, the Palacio Arzobispal (Archbishop's Palace), the Fábrica de Tabacos (Tobacco Factory), the Town Hall (Town Hall), the Dueñas Palace, the D.Fadrique tower, the city walls, the Macarena basilica, the Fine Art Museum, the Contemporary Art museum, the Alameda de Hércules, the barrio de Triana (Triana district), the bridges over the Guadalquivir, the Cartuja island and monastery and the site of Expo 92, the buildings from the Universal exhibition in 1929, the Casa de Luca de Tena, the patios of its traditional houses, the balconies and railings, as well as an endless number of churches, convents and other details which convert the ancient city centre into an open-air museum. If we add to this its taverns, its cuisine, its festivals, and the humour and hospitality of its people, we have formed a generous whole, full of colour, drama, light, music, joy, tradition and modernity which is difficult to match.

The Giralda

"Fiesta de Abril"

Food and Wine Tours

Food is an important event in the Spanish day and Seville has an abundance of restaurants and bars. This city is credited with the invention of "Tapas" which is now being copied all over Europe. There are more than a thousand bars where the choice of food is virtually unlimited, from seafood to ham and sausage, from vegetable to cheese. The Sevillians actually make a meal of them, moving from bar to bar and trying one dish at a time. Various companies can organise Tapas tours, cooking classes, wine tasting, one-day tours related to ham, olive oil and wine - as an example, try "A Question of Taste" at www.aqot.com.

In the Santa Cruz quarter, try Bar Giralda, Modesto, Las Teresas and Casa Robles.

In Triana, El Kiosco de las Flores, Casa Cuesta. In Santa Catalina, El Rinconcillo, El Bacalao and Quitapesares (Bar Perejil).

Emerging Nanoelectronic Device Technologies

Wolfgang Porod
Univ. of Notre Dame, Center for Nano Science and Technology (USA)

This talk will present an overview of the current status and expected future developments of emerging research devices and circuit technologies. By their very nature, these comments will reflect the views of the author, but care will be taken to place these comments within the context of the International Technology Roadmap for Semiconductors (ITRS). We will review expected performance characteristics for processing, sensing, and (where applicable) for actuating, and we will discuss how these novel devices would compete with conventional evolutionary scaled-down silicon transistors.

Wolfgang Porod currently is Frank M. Freimann Professor of Electrical Engineering at the University of Notre Dame. He received his Diplom (M.S.) and Ph.D. degrees from the University of Graz, Austria, in 1979 and 1981, respectively. After appointments as a postdoctoral fellow at Colorado State University and as a senior research analyst at Arizona State University, he joined the University of Notre Dame in 1986 as an Associate Professor. He now also serves as the Director of Notre Dame's Center for Nano Science and Technology. His research interests are in the area of nanoelectronics, with an emphasis on new circuit concepts for novel devices. He has authored some 300 publications and presentations.

Professor Porod is a Fellow of the IEEE and has served (2002-2003) as the Vice President for Publications on the IEEE Nanotechnology Council. He also has been appointed an Associate Editor for the new IEEE Transactions on Nanotechnology. He has been active in the organization of numerous international conferences, Special Sessions and Tutorials, and as a speaker in IEEE Distinguished Lecturer Programs.

Foresight on Information Society Technologies

Ramón Compañó
European Commission
Joint Research Centre (DG JRC),
Institute for Prospective
Technological Studies (Spain)

Ambitious goals were set at the Lisbon Summit in 2000 for the European Union to become the most competitive and dynamic knowledge-based economy in the world by the end of the decade. In this context, the role and contribution of Information and Communication Technologies (ICTs) is particularly important for two reasons. First, it is indisputable that ICTs enhance the productivity and quality of services in all economic sectors. It is a systemic technology, affecting or enabling the necessary social and institutional changes needed to meet the Lisbon Objectives. Second, the ICT sector is a highly important industry per se and its success will be crucial to achieving these Objectives.

How can foresight accelerate to take the necessary process towards the Lisbon Objective? To be able to provide useful input on the prospects of ICT, we need to understand the underlying forces and factors that influence ICT research, development and deployment. These forces are not always obvious. An important step is to identify a number of driving forces and challenges confronting the European Information Society. The influencing factors may be of a social, economic, political or technological nature. They are interrelated in complex ways, and the factors themselves, as well as their relationships, may change over time. A first step in identifying key factors is to review some major European IST scenario studies, identifying the trends and other drivers and challenges portrayed as likely to be important influences on future societal changes. Trends need to be considered seriously; they are liable to affect whatever is foreseen and planned - for instance, one major trend is the aging population, which will influence labour and consumer market development, requirements for ICT applications in education and health, and so on. For technology trends, I will present the concept of technology trajectory projections which should deliver different information than conventional technology roadmaps.

Biography: Ramón Compañó studied physics at the Polytechnic University (RWTH) of Aachen, Germany, where he received his degree and PhD. Ramon was performing research at the University of Modena, Italy, before joining the European Commission in Brussels in 1993. He served first as project officer on material sciences and metrology and later on microelectronics. In 1996 he set-up a number nanotechnology activities within the IST programme, particularly on nano-electronics. In 2002, he moved to the strategy division of the IST programme and in 2004 to the Institute for Prospective Technological Studies (IPTS) in Seville, Spain. His research interest at the IPTS is foresight on IST and the impact of the convergence of technologies.

Micro-Technologies for Neural Interfaces

Eduardo Fernández
Instituto de Bioingeniería,
Univ. Miguel Hernández (Spain)

The development of neuroprosthetic devices can have high potential impact on brain research and brain-based industry, and is one of the central problems to be addressed in the next decades. We will review and summarize the most important physiological principles regarding this neuroprosthetic approach and present a survey of the present state of developments concerning the feasibility of a visual neuroprostheses, as a means through which a limited but useful visual sense could be restored to profoundly blind people. If we can understand more about the fundamental mechanisms of neuronal coding, and to safely stimulate nervous system, there will real potential to apply this knowledge clinically.

Biography: Eduardo Fernández received his M.D. and a Ph.D. degree in Neurosciences from the University of Alicante, Spain, in 1986 and 1990 respectively. He is currently Associate Professor at the University Miguel Hernandez (Spain) and Director of the Artificial Vision Laboratory at the Bioengineering Institute of the University Miguel Hernandez. He also serves as the Director of the Department of Histology and Anatomy. In the last years he has been using histological as well as electrophysiological techniques to understand how mammalian retinal cells and the circuitry within the retina can manage and code visual information. He is coordinating an European Project which aims to demonstrate the feasibility of a cortical visual neuroprostheses for the profoundly blind.

SPIE Digital Library

The SPIE Digital Library, one of the most extensive resources available on optics and photonics, contains more than 100,000 full-text papers from SPIE Journals and Proceedings published since 1998. It also includes citations and abstracts for most SPIE papers published since 1990.

A personal subscription includes 50 full-text papers from the Digital Library for a period of one year. Personal subscriptions represent a significant savings over single-paper purchases.

You have 12 months to download your 50 papers, during which time you may track your activity on the MySubscription account page. This account page also serves as a personal archive.

Subscribers will receive e-mail notices and reminders advising of low or exhausted download balances or pending subscription expirations.

Personal Subscriptions apply to digital papers only. Hard copies of papers not yet available in digital format may be ordered via the SPIE Bookstore.

Reference linking

Reference linking is available for all SPIE Journal papers published since 1999. Each Journal abstract page includes the complete list of references from that paper in HTML, with citation links as applicable. Only subscribers can access this feature.

Links are also provided to INSPEC and MEDLINE records. Proceedings papers have assigned DOI numbers and thus may be linked from other sources in the technical literature. Outbound reference linking from SPIE Proceedings papers to references cited within the paper is planned for the future. SPIE is a member of CrossRef.

E-mail Alerts

Users may sign up for **E-mail Alerts** and receive e-mail notification with links to the tables of contents when new Journal issues or Proceedings volumes are published that satisfy user requests.

My Article Collections

The Article Collection feature allows users to mark papers of interest and assign their citations to personal Article Collection folders. This is useful for quick identification and storage of selected citations as well as for sharing bibliographies with other users.

Proceedings of SPIE

Conferences will generate editor-reviewed, full manuscript volumes published in the *Proceedings of SPIE*. The estimated time to publication of the proceedings is 6-12 weeks after the symposium. An additional 2 weeks (North America) up to 4 weeks (elsewhere) should be expected for postal delivery of published volumes. The Symposium CD-ROMs will be available approximately 14-16 weeks after the symposium, with similar delivery times.
